

“This magnet produces scans equal to or better than my 1.5T high field magnet.”

*Radiologist reaction to testing out the Magnifico*

This was a busy week. I took one of my clients to a new installation of the Esaote Magnifico™ Open MRI. I have to say, I was cautiously optimistic.

The actual proof for me, was from listening to the radiologist react to this non-staged real-life study. My client had no preconceived prejudice; if anything, he did not expect too much from a 0.4T permanent magnet.

Watching the results in real time, I was amazed. I was even more surprised listening to his reaction, “This magnet produces scans equal to or better than my 1.5T high field magnet.”

The average time per patient was between 20-24 minutes. This was not rushed, and a 16-20 patient standard day would not be an issue.

### This magnet is a game changer!

- No helium
- 85% less power consumption
- 45% less service expense
- Ease of use getting the patient positioned

On top of this, the patient’s experience was fantastic — 100% non-claustrophobic, quiet, and comfortable!

My takeaway is:

**PATIENT EXPERIENCE: A+**  
**ZERO HELIUM: A+**  
**HIGH FIELD QUALITY: A+**  
**COST OF OWNERSHIP: A+**
